SELECTED PROJECTS

Noise vs. Blur | Jan 2021 – Present

Understanding complimentary relationship between short and long exposures. Developing a network that can utilize information from different exposures with varying noise instantiations. Tools: PyTorch.

Depth from Defocus with Learned Optics | Aug 2020 – Jan 2021

Published in ICCP 2021. Personal contributions include rendering ground truth examples in Blender, running analyses of baseline models, designing 3D print-outs for building the camera prototype, PSF and demo captures with prototype.
Tools/Skills: PyTorch, Blender, Onshape, real-life capture, PSF calibration.

Focusing Curved Focal Planes in Microscopy | June 2020 – Sep 2020
